PROFESSIONAL PROFILE

MSc Data Science candidate at the University of Salford (2025–2026) with a strong focus on Machine Learning and Natural Language Processing. Independently designed and deployed end-to-end ML solutions achieving upto 98.6% accuracy. Experienced in Python, SQL, NLP pipelines, and data visualization. Seeking an entry-level data science or data analyst role in the UK where I can apply practical modelling skills to real-world business problems.

EDUCATION

MSc Data Science University of Salford, Manchester, UK	2025 – 2026
BSc Computer Science Osmania University, India	2021 – 2024

TECHNICAL SKILLS

Languages & Libraries: Python, SQL/MySQL, NumPy, Pandas, Scikit-learn, NLTK, Matplotlib, Seaborn
Machine Learning & NLP: Classification, Regression, Feature Engineering, Sentiment Analysis, TF-IDF, Stemming, Naïve Bayes
Tools & Platforms: PowerBI, Streamlit, Jupyter Notebooks, Git/GitHub, Excel, VS Code
Soft Skills: Independent problem-solving, self-directed learning, analytical thinking, attention to detail

WORK EXPERIENCE

Data Analytics Training Programme <i>Gradience UK</i>	Nov 2025 – Dec 2025
- Completed an industry-led programme covering professional data analysis workflows, Python-based EDA, and business reporting using structured datasets. - Developed practical understanding of how data insights support commercial decision-making within a UK business context.	
Data Science Trainee <i>Full Stack Academy</i>	Aug 2024 – Mar 2025
- Analysed large datasets using Python and SQL to build and optimise predictive models, improving overall accuracy by 20% through iterative model tuning. - Improved stock movement prediction F1-score from 0.80 to 0.88 (+10%) by applying feature engineering techniques and integrating sentiment analysis into the model pipeline. - Gained hands-on experience with the full ML workflow — from data cleaning and EDA through to model evaluation and reporting.	

PROJECTS

Email Spam Detection Web App <i>Python · NLTK · Scikit-learn · Streamlit · TF-IDF</i>	2024
- Independently designed and deployed a live email spam classifier using Multinomial Naïve Bayes and advanced NLP techniques (TF-IDF, stemming, stopwords removal), achieving 98.6% accuracy and 92% spam recall. - Built and deployed an interactive Streamlit web app enabling real-time classification — reducing simulated data noise by 40% and improving phishing detection for end users.	
Job Market Analysis — Data Field <i>Python · Pandas · NumPy · Matplotlib · Seaborn</i>	2024
- Independently conducted an extensive analysis of 14,199 job roles across the data domain, uncovering salary trends, in-demand skills, and hiring patterns by experience level and location. - Visualised insights on top-paying and high-demand roles, producing actionable findings on how work setting and geography affect data science compensation.
